### Product Summary

Equipped with a state-of-the-art GPS receiver, the KCS TraceME Module provides reliable and accurate navigational data.

All communication is handled rapidly and effectively by a GPRS/GSM modem (QUAD band version) through GPRS or SMS. In areas without network coverage, position-data and events are stored in memory (up to 55,000 positions). As soon as communication is restored, all information can be transmitted.

A unique feature is the user-configuration menu, which controls all actions like sending position-information, depending on all possible events. All of the necessary server-side scripts to process and store data from the TraceME units are available, free of charge.

If you do not want to host data and maps yourself, you can use the hosting services of one of our many partner companies.
